

Thematic Session

Session title: Set Theory

Organizers:

Benedikt Loewe, Universitaet Hamburg, bloewe@science.uva.nl

Piotr Koszmider, IMPAN, P.Koszmider@impan.pl

Description of the topic:

Set theory is one of the areas of the foundations of mathematics in which the influence of Polish mathematics from the 1920s and 1930s can still be felt today. Within the European set theory landscape, Germany and Poland have very distinctive traditions, and bringing them together promises fruitful interactions. The organizers of this thematic session are also coordinating a satellite workshop at Bedlewo, and we expect that many of the speakers in Bedlewo will travel to Poznan to attend the thematic session.
